Open to global opportunities and relocation | vankeller1228@gmail.com | LinkedIn: <https://www.linkedin.com/in/van-keller-2a7b36410> | X: <https://x.com/VanKeller1228>

## PROFESSIONAL SUMMARY

Biotechnology professional with over two years of hands-on experience in automated oligonucleotide and primer synthesis, reagent preparation, downstream purification support, process monitoring, production documentation, and sample traceability. Experienced in reviewing HPLC, MS, and OD results for process tracking and preliminary troubleshooting, and in coordinating sample handoffs and abnormal-result follow-up with purification and QC teams.

## CAREER OBJECTIVE

Seeking a production or process-support role within a CDMO environment where I can strengthen my capabilities in GMP-controlled manufacturing and contribute to international, cross-functional operations.

## CORE COMPETENCIES

Oligonucleotide Synthesis | Primer Synthesis | Reagent Preparation | Downstream Purification Support | Production Documentation Practices | Batch Records | Process Monitoring | Sample and Batch Traceability | HPLC, MS, and OD Result Review | Preliminary Troubleshooting | QC Coordination Support | Laboratory Safety | 5S | Cross-functional Collaboration | PCR | Sanger Sequencing | Word, Excel, PowerPoint

## PROFESSIONAL EXPERIENCE

### Oligonucleotide Synthesis Researcher / Purification Support

- GenScript Biotech, Nanjing | Mar 2024 - May 2026
- Followed SOPs and production instructions for automated oligonucleotide and primer synthesis.
  - Prepared reagents, verified sequence and sample information, operated automated equipment, monitored production processes, and maintained production records.
  - Supported downstream purification workflows, including ammonia cleavage, acetonitrile washing, TE elution, and related primer production processes.
  - Maintained production batch, sample, instrument position, molecular weight, and processing records to support traceability across synthesis, purification, and QC handoffs.
  - Reviewed HPLC, MS, and OD results for process tracking, data consistency checks, and preliminary abnormal-result follow-up.
  - Coordinated sample transfer, testing progress, and abnormal-result follow-up with purification and QC teams.
  - Supported daily equipment inspection, 5S, laboratory safety, hazard identification, EHS coordination, and corrective follow-up as a team safety representative.

### Sanger Sequencing Laboratory Intern

- GenScript Biotech, Nanjing | Dec 2022 - May 2023
- Supported Sanger sequencing sample handling, sample information checks, numbering, experimental records, and sample transfer.
  - Assisted with DNA sample preparation, PCR amplification, product purification, concentration testing, sequencing reaction setup, result organization, and abnormal-result follow-up.

## SELECTED PROJECT

### Positive-Control Primer Synthesis, Purification, and Quality Tracking Project

- Processed approximately 16–40 positive-control primers per day through synthesis, ammonia cleavage, washing, elution, and downstream purification.
- Maintained a shared tracking file covering synthesis batch, primer position, molecular weight, processing method, and HPLC, MS, and OD results to support traceability and cross-team information flow.
- Coordinated synthesis, purification, and QC team handoffs through shared records and result feedback.

## EDUCATION

Shaanxi University of Chinese Medicine | B.S. in Biotechnology | Sep 2019 - Jun 2023  
Relevant coursework: Molecular Biology, Biochemistry, Genetic Engineering, Genetics, Instrumental Analysis, Microbiology.

## LANGUAGES / ADDITIONAL INFORMATION

English: Able to read SOPs and technical documents, understand routine work-related written communication, and handle basic workplace conversations.
